

TPM

Make Identity

→ wrapped AIK

cert req = $\{ \text{pub AIK, pub EK} \}_{\text{pub CA}}$ ^{encrypted}

Activate Identity

← $\{ \text{Cert (AIK)} \}_K, \{ K, \text{AIK} \}_{EK}$

? is AIK loaded identity key?

If so, → K

If not, error!

The APL Guest Network

The Guest Network is available 24/7. To get access, you need the "WPA2PSK" Key and Guest password, shown below. When you're logging in, you may have to change the wireless client configuration Security type to "WPA2-Personal" with the Encryption type to "AES".

Guest Key/Password

WPA2PSK key (WPA2-Personal): HoldBack

Encryption type: AES

GUEST password: LJ*^54er

Last updated: 7/9/12

Note: Our wireless network was recently upgraded to support up to 300Mbps connections. To take advantage of the faster speeds, we upgraded from "WEP" to the more current "WPA2PSK" key.
